

Dear Colleagues:

The Misch International Implant Institute is proud of the commitment to quality that our graduates exhibit every day in their patient treatment, and we strive to honor that commitment with our continuing efforts in clinical research and education. We look for this same level of engagement in our corporate partners. For this reason, I am very proud to announce we have recently selected a new implant partner for all Misch Institute courses: the Hahn™ Tapered Implant System from PrismaTik Dentalcraft, Inc., a wholly owned subsidiary of Glidewell Laboratories.

While our previous implant partner company continues to provide a fine product, the Hahn system bears several features that I believe our graduates will find to their advantage, including:

- A tapered implant design with an excellent cutting edge that provides more predictable implant insertion.
- A well-designed surgical kit supporting a simplified surgical protocol that is easily adapted for D1–D4 bone densities, with fewer drilling steps.
- Tapered shaping drills that match the implant lengths, eliminating the need for drill stops and simplifying the surgical steps.
- Unsurpassed customized restorative options, working in partnership with Glidewell Laboratories.
- Significantly lower component costs, which allow more patients to benefit from dental implant treatment.

Jim Glidewell, CDT, and his team share my commitment to quality, research, and the desire to make life-changing implant treatment available to more patients. Their dedication to this common goal is tangible and wide-ranging, from supporting our educational efforts to providing an advanced product portfolio to grow the dental industry. For all of these reasons, I encourage you to take a serious look at the Hahn Tapered Implant System and Glidewell Laboratories.

Sincerely,

A handwritten signature in black ink, appearing to read 'Carl E. Misch', is written in a cursive style.

Dr. Carl E. Misch
